

How to Install an SSL via cPanel

Attention Resellers: If this is your first time installing an SSL for a client, please follow the steps outlined in this article to enable SSL Host Installer via Feature List: <https://www.hostdime.com/resources/create-a-feature-list/>

Step 1: Once you have ordered the SSL certificate and the .CRT files have been issued, log into cPanel

Step 2: Go to **SSL/TLS**

Step 3: Click on "Manage SSL sites"

SSL/TLS

The SSL/TLS Manager will allow you to generate SSL certificates, certificate signing requests, and private keys. These are all parts of using SSL to secure your website. SSL allows you to secure pages on your site so that information such as logins, credit card numbers, etc are sent encrypted instead of plain text. It is important to secure your site's login areas, shopping areas, and other pages where sensitive information could be sent over the web.

DEFAULT SSL/TLS KEY TYPE

Show Help Text ?

The default key type for SSL/TLS certificates and CSRs.

☒ Use the system's default key type. Recommended Current

Current value: RSA, 2,048-bit

☐ RSA, 2,048-bit

☐ ECDSA, P-384 (secp384r1)

☐ ECDSA, P-256 (prime256v1)

☐ RSA, 4,096-bit

Save

PRIVATE KEYS (KEY)

[Generate, view, upload, or delete your private keys.](#)

CERTIFICATE SIGNING REQUESTS (CSR)

[Generate, view, or delete SSL certificate signing requests.](#)

CERTIFICATES (CRT)

[Generate, view, upload, or delete SSL certificates.](#)

INSTALL AND MANAGE SSL FOR YOUR SITE (HTTPS)

Manage SSL sites.

NOTE: If you do NOT see the Manage SSL Sites option, this means you must enable it by creating a Feature List via WHM. To create a feature list, please follow the steps outlined in this article: <https://www.hostdime.com/resources/create-a-feature-list/>

Step 4: Copy/Paste your certificate file into the **Certificate: (CRT)** box and then click "Autofill by Certificate". This will cause the Private Key to auto-populate if you used the CSR creator inside of cPanel previously.

Install an SSL Website

Note: You don't have a dedicated IP address. Browsers that were released before 2013 may not support SNI. Because of t websites.

-----END CERTIFICATE-----
```

In most cases, you do not need to supply the CA bundle because the server will fetch it from a public repository during installation.
