

# How to Create a Feature List

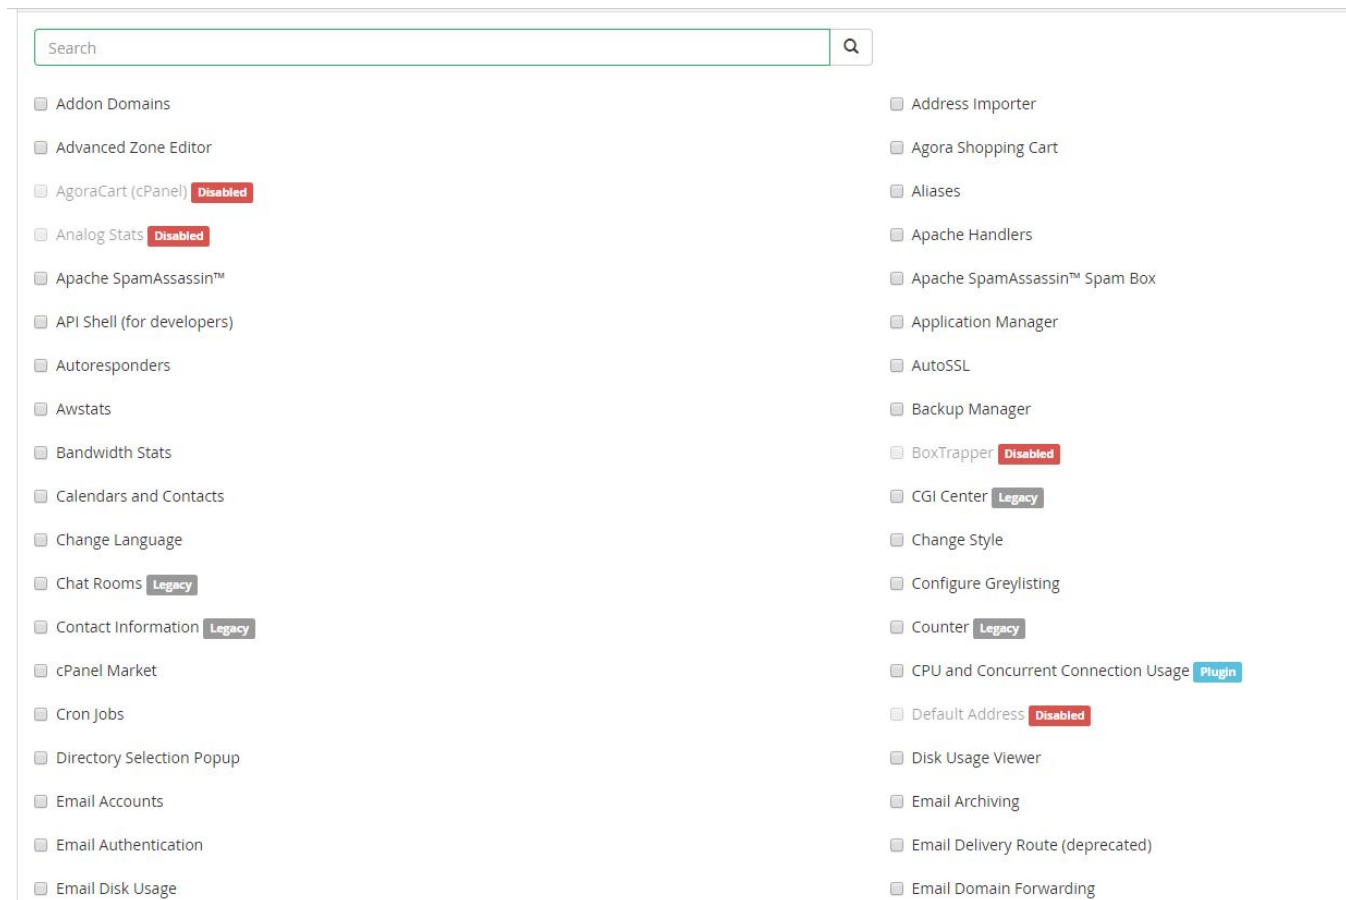

**Step 1:** Log into WHM

**Step 2:** Go to **Feature Manager**

**Step 3:** Name your list and click **Add Feature List**.

**Step 4:** You will now see the options you have to select from for your newly created list.

For example, if you want your clients to have the ability to install SSL certificates, you can check the option called "SSL Host Installer".

<input type="checkbox"/> RubyGems	<input type="checkbox"/> Search Engine Submit Tool <b>Legacy</b>
<input type="checkbox"/> See PHP Configuration	<input type="checkbox"/> Server Status Viewer
<input type="checkbox"/> Simple CGI Wrapper <b>Legacy</b>	<input type="checkbox"/> Simple Zone Editor
<input type="checkbox"/> Site Publisher	<input type="checkbox"/> Site Software
<input type="checkbox"/> Softaculous Apps Installer <b>Plugin</b>	<input type="checkbox"/> SSH Access
<input type="checkbox"/> SSL Host Installer	<input type="checkbox"/> SSL/TLS
<input type="checkbox"/> SSL/TLS Wizard	<input type="checkbox"/> Subdomain Stats
<input type="checkbox"/> Subdomains	<input type="checkbox"/> Support System Submission <b>Legacy</b>
<input type="checkbox"/> Theme Switching	<input type="checkbox"/> Track DNS
<input type="checkbox"/> Two-Factor Authentication (Google Authenticator)	<input type="checkbox"/> Update Notification Preferences
<input type="checkbox"/> Video Tutorials <b>Legacy</b>	<input type="checkbox"/> Virus Scanner
<input type="checkbox"/> Web Disk	<input type="checkbox"/> Webalizer
<input type="checkbox"/> Webmail	<input type="checkbox"/> Webprotect
<input type="checkbox"/> YaBB (cPanel) <b>Disabled</b>	

**Step 5:** Click **Save**.

For Resellers, we have everything **except** for the following enabled by default:

- API Shell
- Change Language
- SSL Host Installer

**Step 6:** Add clients to your feature list(s). Go to **Edit a Package** and select a package that will use the new feature list. Click **Edit**.

## Edit a Package

**Package**

- xachick\_10gidget20
- xachick\_5gidget10

Edit

**Step 7:** Go to the settings section at the bottom. Change the default feature list to the one you just created. This feature list will now be applied to any client using this particular hosting package. Click **Save Changes**.

## Settings

**Options**

- ☐ Dedicated IP
- ☐ Shell Access
- ☒ CGI Access
- ☐ Digest Authentication at account creation.
